

SuperVision

Clearinghouse Monitoring now available for License Monitor

Clearinghouse Monitoring identifies drivers who commit a drug and alcohol program violation, offering an added layer of protection for your fleet and making it the perfect add-on to License Monitoring.

Clearinghouse is integrated with Continuous License Monitoring. It will automatically query the FMCSA Drug and Alcohol Clearinghouse database and report any drivers with activity on the schedule you choose – daily, weekly, monthly, or quarterly – using the active drivers from your existing SuperVision License Monitoring roster. It will alert on your SuperVision dashboard if one of your drivers returns a hit and requires a full query to be run on the FMCSA Drug and Alcohol Clearinghouse website.

The capabilities offered by Clearinghouse Monitoring are exclusive to SuperVision. Nobody else offers you the peace of mind, and the protection from nuclear verdicts, that Clearinghouse with Continuous License Monitoring provides.

Clearinghouse Monitoring benefits

- Proactive identification of drivers in your fleet with potential drug and alcohol issues – on an ongoing basis
- Opportunity to address a potential driver issue before it becomes a liability
- Improved overall fleet driver compliance and safety
